

Read Your Movie

You know what everyone doesn't have enough of? Time.

Most people these days just don't have enough time to read a novel or watch a three hour movie. Some people are unaware that there are movie versions of many popular books. We often wonder, was the book better? Was the movie adaptation better? Is it worth reading the 500 page novel or watching the 3 hour movie?

That's where Read Your Movie comes in.

Utilizing next generation technology, we have created an innovative application that provides a simple solution to this real-world problem.

All you need to do is enter a book or movie title of your choice and key details will be featured, including title, author, plot, and rating. In addition, a link is provided that will take you where to listen, watch, or read your desired media.

It's time to stop wasting time and start using our application to fulfill your daily viewing pleasures.

Concept

Description: When a user enters a movie, information for that movie is displayed on one card and the information for the corresponding book is displayed on the other card.

Motivation: Save time by watching a movie instead of reading the book. Discovering a movie that was made based on a book.

User story: As a busy person I want save time, so I can read a book or watch a movie as efficiently as possible.

Process

Technologies used:

- Java, HTML ,CSS ,Materialized, jQuery

APIs:

- Google Books
- OMDB

Demo

Directions for Future Development

- Integrating other APIs
- Adding additional search options such as
 - ISBN
 - Author
 - Director
 - Genres
 - Best Sellers
